

## Material & care

### Material

After a long search for the right producers and materials, we find ourselves very pleased with the quality of our products. We use the finest quality materials for our collection.

Sterling silver 925 is the primary material for most of our jewelry. We plate our sterling silver with a thick layer of 18K gold. This process is also known as vermeil.

What does this all mean?

The important things you need to know about plated jewelry:

- The purity of the gold layer. The purity of the gold layer is always between 14K and 24K. The higher the purity, the longer it will last. Our golden plating is always in 18K gold when plated on 925 silver.
- The thickness of the plating. This is measured in micron with 0.1 being the lowest and 0.5 being the highest. Our jewelry is plated with a 0.3 micron golden layer.
- The base material where the gold is plated on. Materials like sterling silver and brass are used for less expensive products. Our base material of our necklaces and name hoops is always 925 sterling silver, the highest quality for a base material and nickel free.

### Care

When cleaning your Golden Noodle jewelry please use a 100% cotton cloth and don't rub it too hard. Be gentle with the surface, it will love you for it!

To keep your jewelry at its' finest, please don't take it for a shower, a swim, a sweaty workout or dwell it in perfume.

And last but not least: As our jewelry is plated, it can get dull with time. That's why you can always use our plating service for the name hoops, charms and name necklaces. For €20,00 your jewelry will shine again like it's brand new!

XOXO
